

KESHAV KUMAR JHA

Python Backend Developer | Django Developer | REST API Developer | AI/LLM Integration | PostgreSQL

Uttam Nagar, New Delhi | +91 9667131795 | kjkeshav0698@gmail.com

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Professional Summary

Results-oriented Python Developer with expertise in Core Python, Django, PostgreSQL, and SQL backend engineering. Demonstrates end-to-end capability in designing RESTful APIs, OOP architectures, and data structures. Uses AI-assisted workflows (ChatGPT, Gemini, Claude) to accelerate API integration and documentation. Currently architecting LifeChronicle, a full-lifecycle software engineering project focused on system design, database schema optimization, AI/LLM features, and cloud delivery.

Technical Skills

Languages & Core: Python, SQL, JavaScript (Basic), JSON

Backend & Architecture: Django, PostgreSQL, REST API Development, Django REST Framework (DRF), Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), System & Database Design

Frontend Foundations: HTML5, CSS3, Bootstrap 5

AI Engineering & Workflows: Prompt Engineering, LLM Integration, ChatGPT, Google Gemini, Claude, AI-Assisted Debugging & Code Generation

Tools & Cloud Deployment: Git, GitHub, VS Code, Netlify, Render

Experience: Fresher Backend Developer (Self-Directed Project Development) | May 2026 – Present

- Gained hands-on backend development experience by independently designing, building, and deploying 5 production-style projects, including LifeChronicle, a large-scale Django/PostgreSQL system.

Featured Software Projects & Portfolio

1. LifeChronicle - Digital Life Event Management Platform - In Progress ([GitHub](#))

Technologies: Python | Django | PostgreSQL | DRF | REST APIs | AI/LLM Integration

- Delivering a specification-first architecture based on 19 comprehensive SRS and design documents, establishing end-to-end database schemas and business logic.
- Developing 30+ REST API endpoints using DRF and PostgreSQL across 9 Django applications (30+ database models) handling identity, media, geo-location, and event tracking.
- Implementing AI/LLM analytical services with backend support for 7 languages and centralized master data management layers.

2. DevForge - Full-Stack Development & Productivity Platform - Completed ([GitHub](#) | [Live Demo](#))

Technologies: Python | Django | PostgreSQL | DRF | REST APIs | Google OAuth | Gmail API | AI/LLM

- Built a modular Django platform across 6 applications with 5 core models and 10+ views for authentication, email, location, AI, files, and reporting.
- Developed 3 REST API endpoints using DRF and integrated PostgreSQL, Google OAuth 2.0, Gmail API, SMTP, and Leaflet-based location services.
- Integrated OpenAI and Gemini APIs for AI-assisted email and location workflows, with file management, reporting, pagination, and Render cloud deployment.

3. Registration & Login System ([GitHub](#) | [Live Demo](#))

Technologies: HTML5 | CSS3 | Bootstrap | JavaScript | JSON

- Engineered a 6-page responsive student portal with client-side validation, featuring registration, login, password recovery, session logout, dynamic welcome views, and JSON LocalStorage data persistence.

4. Staff Management System ([GitHub](#) | [Live Demo](#))

Technologies: Python | Django | PostgreSQL | Django ORM | HTML5 | CSS3 | Bootstrap

- Built a focused Django MVT application (1 app, 1 model) backed by PostgreSQL to manage full staff CRUD workflows, database migrations, template inheritance, and a responsive Bootstrap UI.

5. Exam Center Management System ([GitHub](#) | [Live Demo](#))

Technologies: Python | Django | PostgreSQL | Django Forms | HTML5 | CSS3 | Bootstrap

- Architected a 5-page Django exam center application (1 app, 1 model) using PostgreSQL, leveraging ModelForms for server-side validation, ORM operations, dynamic URL routing, and template inheritance.

6. Personal Portfolio Website ([GitHub](#) | [Live Portfolio](#))

Technologies: HTML5 | CSS3 | JavaScript | GitHub Pages

- Designed and deployed an AI-assisted, single-page responsive personal portfolio using JavaScript, HTML5, and CSS3 on GitHub Pages, utilizing LLMs for UI refinement, code generation, and debugging.

Education: Master of Computer Applications – IGNOU (2021) | Bachelor of Computer Applications – IGNOU (2019)
