Featured Software Projects

1. Registration & Login System

Technology Stack

HTML5 | CSS3 | Bootstrap | JavaScript | JSON | Local Storage

- Developed a responsive authentication portal with registration, login, password recovery, and dashboard functionality.
- Implemented client-side validation, automated registration ID generation, and JSON-based data handling using Local Storage.
- Designed a responsive UI with Bootstrap and modern JavaScript (ES6).
- Links: [GitHub](#) | [Live Demo](#)

2. Staff Management System

Technology Stack

Python | Django | PostgreSQL | Django ORM | HTML5 | CSS3 | Bootstrap

- Built a Django MVT-based CRUD application for managing staff records.
- Implemented PostgreSQL integration, Django ORM, database migrations, and CRUD operations.
- Developed responsive templates using HTML5, CSS3, and Bootstrap, and deployed the application on Render.
- Links: [GitHub](#) | [Live Demo](#)

3. Exam Center Management System

Technology Stack

Python | Django | PostgreSQL | Django Forms | HTML5 | CSS3 | Bootstrap

- Developed a Django CRUD application for managing examination center records.
- Implemented Django ModelForms, form validation, URL routing, template inheritance, and ORM-based database operations.
- Integrated PostgreSQL backend and deployed the application on Render.
- Links: [GitHub](#) | [Live Demo](#)

4. LifeChronicle (*Enterprise Software Project – Under Development*)

Technology Stack

Python | Django | Django REST Framework | PostgreSQL | REST APIs | AI/LLM | Pandas | Matplotlib | System Design

- Designing an enterprise-scale digital life management platform using a specification-driven development approach.
- Preparing comprehensive SRS, system architecture, database design, business rules, validation strategy, and REST API specifications before implementation.
- Developing a modular Django application with authentication, event management, media management, location services, and scalable architecture.
- Planning AI/LLM integration, multilingual support, and intelligent automation features.
- Utilizing Pandas and Matplotlib for analytics, reporting, and administrative dashboard visualizations.
- Following end-to-end software engineering practices, including documentation, testing, version control, deployment planning, and maintenance.

Personal Portfolio Website

HTML5 | CSS3 | JavaScript | Responsive Design | GitHub Pages

- Designed and developed a fully responsive personal portfolio website to showcase software projects, technical skills, learning repositories, and professional profile.
- Built using semantic HTML, custom CSS, and JavaScript with a mobile-first, clean, and recruiter-friendly interface.
- Integrated project showcases, resume download, GitHub repositories, LinkedIn profile, and contact information in a single professional website.
- Deployed using GitHub Pages with a focus on performance, accessibility, maintainability, and responsive design.

Technical Learning Repositories

These repositories demonstrate my continuous learning, problem-solving skills, and practical implementation of Python programming concepts.

1. Python Core Learning

Technology: Python

- Covers Python fundamentals, OOP, file handling, exception handling, and modules.
 - Includes beginner-friendly examples with clean, well-structured code.
 - Repository: [GitHub](#)
-

2. Python Data Structures & Algorithms

Technology: Python

- Implements core data structures and algorithms with Python.
 - Covers linked lists, stacks, queues, trees, graphs, searching, and sorting techniques.
 - Repository: [GitHub](#)
-

3. Python Problem Solving

Technology: Python

- Collection of coding challenges and interview-oriented programming problems.
- Covers string, array, mathematical, logical, and pattern-based questions.
- Repository: [GitHub](#)
